Now the Doors Are Open: Cross-Cultural Issues in Chinese Constructivist Education

Jill Stansbury, M. A. and Bonnie Qian, M. A.
DePaul University

FINDINGS

Teachers need more accredited Montessori training programs. Schools need more qualified teachers. Families need more support from quality bilingual schools.

</table>

IMPLICATIONS

The classroom observations showed that, on average, teachers in this program spent three quarters of the morning work cycle giving feedback and redirecting children’s behavior, largely around executive function tasks like how to organize their work. Only four percent of their time was spent giving encouraging feedback to reinforce other long-term learning habits and skills, such as perseverance, learning from mistakes, etc.

LIMITATIONS AND NEXT STEPS

• Even when fully completed, this study will be very small. Its purpose was to gather some initial data on perceptions about cultural issues in Chinese constructivist education programs. Further research in this area will need to be done to determine if these trends are generalizable.
• Finalize the data analysis of the International Baccalaureate and Association Montessori Internationale programs.

RESEARCH METHODS/VALIDITY CONCERNS

This study looked at two campuses of an American Montessori Society member school startup chain in a large city in northern China. The chain has a total of three schools. A toddler and a 3-6 year old campus were observed on each campus, for a total of four classroom observations. One school was open for two school years and the other for four months. Observation protocols assessed the quality of program implementation, as well as the quality of teacher student interactions for teaching long-term life skills and for teaching higher order thinking skills (Allford, 2013; Dweck, 2006; Lillard, 2012; and O’Donnell, 2008). There were six teacher, five parent, and four administrator interviews using the responsive interviewing technique (Rubin, J. & Rubin, I., 2005). Themes were determined using the techniques of grounded theory (Emerson, Fretz, & Shaw, 1995), along with a Critical Race Theory lens (Parker & Lynn, 2009; Dovidio, et al., 2002).

Interviewer: What values do you want your child to have?
Interviewee: I certainly hope he grows up to have a good character. Of course, I want him to have some international values, not entirely Chinese ones. Now, China is gradually coming in line with international standards. We are in the integration, I certainly hope he can stand on his own, complete his own goals. I hope he can be free, as well as physically and mentally healthy. I just want him to be happy.

BACKGROUND/LITERATURE REVIEW

Since the implementation of the “open door policy” in the late 1970’s, China has reformed its educational policy and rapidly expanded private schools, called minban education (Chan and Wong, 2009). This included a theoretical shift in the Chinese philosophy of early education, specifically from a Soviet model to a constructivist one (Yeh, et al., 2004). Constructivism is a theory of human learning that states that humans build their own knowledge by coming up with theories and testing them through interacting with the world. This project is an exploration of the ways that three Montessori and International Baccalaureate (IB) “minban” or private startup chain schools are negotiating the changing Chinese education market and integrating Chinese culture and language in their Western, constructivist educational processes.

Existing literature about perceptions in Montessori and IB programs reveal that culture clash is a consistent issue when Western education models are used with children from collectivistic cultures, as both these models have a significant focus on the Western values of independence and learner empowerment. A majority of the Montessori studies are master’s theses, and many of the IB studies were conducted on behalf of the IB Organization. There are a few exceptions to this.

OBJECTIVES

To determine the perceptions of parents, teachers and administrators about what, if any, challenges and adaptations occur when implementing AMS Montessori, AMI Montessori, and IB styles of constructivist education in China was the goal. Data analysis has only been completed for the AMS Montessori program and that is what is presented in this document.

The template comes with a number of preformatted text boxes. You can add more blocks by going to VIEW > SLIDE MASTER. After you finish working on your poster, save as PDF and the bars will not be included. You can also delete them by going to VIEW > MARGINS. Margins can also be adjusted by going to FILE > PAGE SETUP or FILE >enburg. You can also copy and paste a table from Word or another program into your poster. The default template text offers a good starting point for working on your poster.

How to add Tables

You can add images by dragging and dropping from your desktop, or by adding them in the current file by going to FILE > INSERT. You can also delete them by going to VIEW > FORMAT SHAPE, TEXT BOX, or by selecting rows and columns. You can also manually change the color of your background by going to VIEW > BACKGROUND. You can also copy and paste a table from Word or another program into your poster. The default template text offers a good starting point for working on your poster.
